Here we can identify which type of products are being returned the most.

We can see that machines, fasteners and chairs are the most returned items.

Perhaps we need more product awareness, so that our customers make the right selection the first time?

Here we look at quarterly profits and how returns may affect these profits.

Whats most concerning here is the 3rd Quarter. Take notice of the significant difference between profit margins and the return rates.

How do we go from a negative profit month to one of the highest return months? *Perhaps we can off set profit loss by reducing returns in these months?*

After analyzing the data, several key issues stand out as contributors to Superstore’s high return rates. Seasonal trends show that returns spike in Q4 for Office and Technology products, while Furniture sees flucuations throughout the year. Addressing this with better sales training during peak months can help customers choose the right products.

Certain items - like machines, fasteners, and chairs - are returned more than others, likely due to mismatched customer expectations. Improved product awareness and detailed specifications can mitigate these issues. Geographically, California, Nevada, and Oregon have notably high return rates, suggesting potential logistical challenges that need investigation.

Customer behavior also plays a role, with some customers consistently returning products. Understanding there pain points and addressing them directly could significantly reduce returns. Meanwhile, items like paper and binders show high returns relative to sales, signaling a need for better product positioning or education.

Finally, returns during months like January and February disproportionately affect low sales periods, while Q3 profits are significantly impacted by returns. Targeted strategies - such as enhanced quality control and refined return policies-can reduce these losses and offset their impact on profitability. By focusing on these areas, Superstore can lower returns, boost profits, and improve customer satisfaction.
